
BC Series Bag Dust Collector

Application and function

It is mainly used for dust removal in grain processing and other fields.

Filter fine dust.

Specification

Model	BC-64	BC-128
Filtered air volume	4500m ³ /h	9000m ³ /h
Weight	300kg	600kg
Suggestions for fan adaptation	4-72 4A 5.5kW	4-72 4.5A 7.5kW

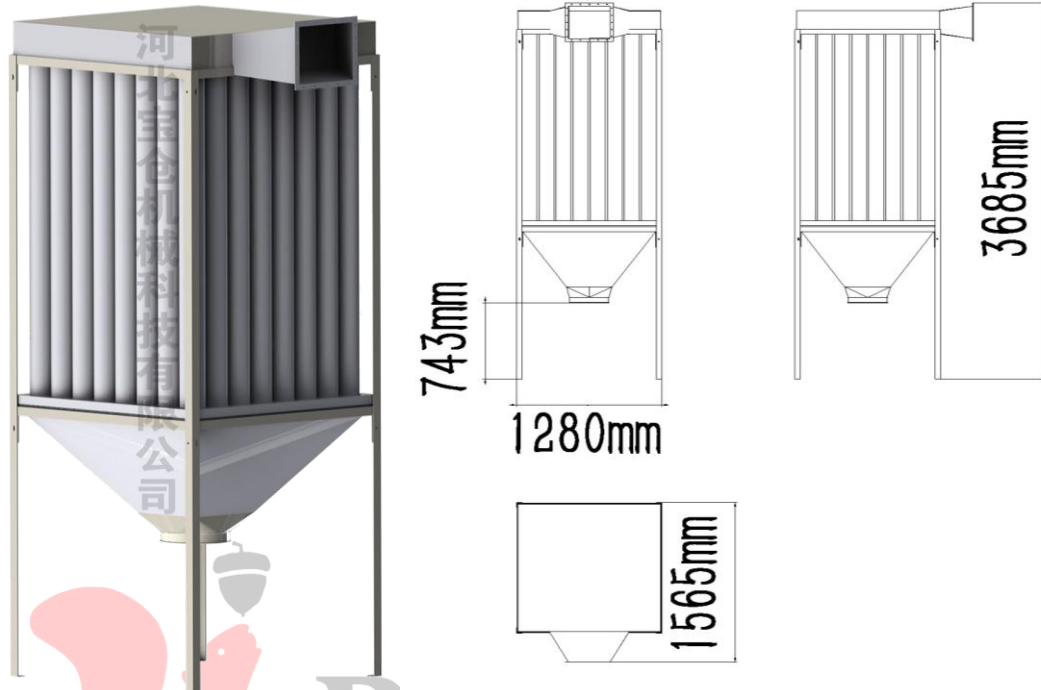

Principle and applicability

Bag dust collector is a kind of dedusting equipment to purify the ambient air. When the dust containing air passes through the filter cloth bag, the dust is blocked by the filter cloth and filtered.

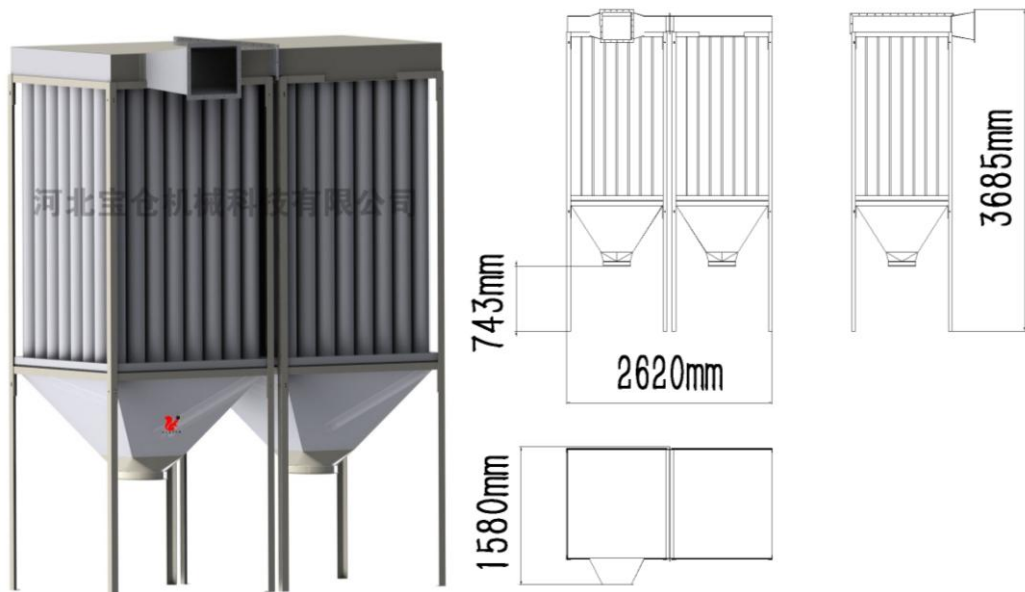

It can filter fine particles. It is often used to collect the dust escaped by cyclone filtration, or directly replace cyclone when the dust amount is not large. In the air separation, it is generally required to use cyclone and bag dust recover at the same time.
